Description

The WBGAC101EA from Weintek is designed for small and medium-sized operating and monitoring tasks in all areas of industrial/building automation. The device is equipped with all the necessary functions, but dispenses with special features and rarely required hardware, thereby significantly increasing the price/performance ratio. Special attention was paid to a compact design. Space is money! With an installation depth of just 36.4 mm, the WBGAC101EA can be installed almost anywhere. The color-neutral plastic housing is ideal for applying your own designed front foil, e.g. with your logo or the device name in your own colors. Your creativity is only limited by the dimensions of the device.

Wachendorff operating devices are industrially robust. The circuit board of the WBGAC101EA is protected against corrosion and moisture by a special coating. The RS485 serial interface is double galvanically isolated. This makes the device ideal for use in harsh industrial environments and ensures reliable operation and a long service life. The fanless system with 32-bit RISC processor and 600 MHz clock has plenty of computing power and impresses with its pleasantly fast page switching. An operating device is only as good as its software. The "EasyBuilder Pro" project planning software for the Wachendorff WBG series makes no special demands on your PC, is easy to use and is available free of charge. The WBGAC101EA already has an integrated EasyAccess 2.0 (remote access service) license and offers the option of establishing a connection to the Internet via WiFi (integrated), for example.
