Description

The ViTAM-9A series is based on a 6th generation Intel® Core™-i processor.

This very powerful and efficient processor family provides sufficient computing power for medium and large applications. The RAM can be expanded to up to 16 GB, enabling more extensive projects such as SCADA or IIoT monitor control applications. The industrial panel PCs in this series are available in display sizes ranging from 15" to 23.8", with a choice of projected capacitive, resistive or no touch. The projected capacitive touch enables multi-touch operation with a corresponding operating system. If pressure-sensitive operation is required (e.g. with gloves), the resistive touch is the right choice. The front panels are absolutely flush with the stainless steel housing (type 304). The housing is designed in IP69K (incl. IP66) with M12 connection options. The unique fanless thermal design of the robust stainless steel housing enables effective temperature control. The ViTAM IPC can be optionally equipped with a high-brightness LCD and/or optical bonding for an outstanding display, even under the most difficult conditions. In addition, expansion cards for further interfaces or RFID can be integrated.
