Description

The ViTAM series offers extremely robust industrial displays in a flush-mounted stainless steel housing with IP66/IP69K certification. The industrial touch displays in this series are available in display sizes from 10.1" to 23.8", with either projected capacitive or resistive touch. The series is supplemented by displays without touch functionality. The projected capacitive touch enables multi-touch operation. If pressure-sensitive operation is required (e.g. with gloves), the resistive touch is the right choice. The front panels are absolutely flush with the stainless steel housing (type 304, optionally 316). The robust housing is designed in IP66/IP69K with M12 connection options. The unique fanless design enables effective temperature control and use in the food sector or laboratories. The touch displays of the ViTAM series can optionally be equipped with a high-brightness display and optical bonding for an outstanding display, even under difficult conditions.
