Description

The ARCHMI-9B series is based on an 8th generation Intel® Core™-i processor.

This very powerful and efficient processor family provides sufficient computing power for medium and large applications. The RAM can be expanded to up to 32 GB, enabling more extensive projects such as SCADA or IIoT monitor control applications. The Panel PCs in this series are available in display sizes ranging from 12.1" to 32" and can be equipped with projected capacitive, resistive or no touch. The projected capacitive touch enables multi-touch operation with a corresponding operating system. If pressure-sensitive operation is required (e.g. with gloves), the resistive touch is the right choice. The front panels are absolutely flush with the die-cast aluminum housing. The housing is IP66 rated. The unique fanless thermal design of the die-cast aluminum housing enables effective temperature control. The ARCHMI IPC can be optionally equipped with a high-brightness LCD and/or optical bonding for an outstanding display, even under difficult conditions. Expansion cards for additional interfaces or WLAN can also be integrated.
