Description

The DRA18-24 power supply units are high-quality switched-mode power supply units for DIN rail mounting. They impress with their compact and intelligent design as well as their robust plastic housing. The output voltage is easy and simple to adjust (21.6 VDC to 28.8 VDC) and is highly stable even with temperature fluctuations and load changes.

In addition to short-circuit protection, overload and overvoltage protection at the output also ensure a high level of safety.
